

BUSIA GOLD AGGREGATION & PROCESSING PROJECT

Preliminary Investment Concept

1. PROJECT OVERVIEW

The project aims to establish a licensed gold aggregation and processing center in Busia County, Kenya, focused on:

- formalizing artisanal gold supply,
- improving gold recovery,
- reducing unsafe mercury use,
- and creating a transparent gold trading ecosystem.

The business intends to serve artisanal and small-scale miners operating within Busia and surrounding regions.

2. THE PROBLEM

Current challenges in the local gold sector include:

- inefficient recovery methods,
- mercury dependence,
- informal gold trading,
- lack of transparent pricing,
- equipment shortages,
- and limited access to formal buyers.

As a result:

- miners lose value,
 - production remains fragmented,
 - and international market access is restricted.
-

3. THE OPPORTUNITY

Global demand for traceable and responsibly sourced gold continues to grow.

Busia County presents a strategic opportunity because:

- it lies within a gold-producing belt,
- artisanal mining activity already exists,
- cross-border trade infrastructure is active,
- and formalization efforts are increasing.

The project seeks to position itself as a structured regional gold hub.

4. BUSINESS MODEL

The business will operate through four core activities:

A. Gold Aggregation

Purchasing gold from licensed artisanal miners through transparent weighing and pricing systems.

B. Processing Services

Providing modern processing solutions aimed at improving recovery rates and reducing environmental risks.

C. Equipment Support

Supplying or leasing essential mining equipment to local operators.

D. Data & Compliance

Maintaining digital production records, traceability systems, and regulatory compliance standards.

5. TARGET MARKET

Primary clients:

- artisanal miners,
- small mining cooperatives,
- local gold traders.

Secondary opportunities:

- regional refiners,
 - export markets,
 - responsible sourcing programs,
 - and institutional gold buyers.
-

6. COMPETITIVE ADVANTAGE

The project intends to differentiate itself through:

- transparent operations,
 - formal compliance,
 - mercury-reduction systems,
 - reliable payments,
 - local partnerships,
 - and scalable infrastructure.
-

7. CAPITAL REQUIREMENTS

Initial funding will support:

- site setup,
- processing equipment,
- licensing,
- security systems,
- logistics,
- and working capital for gold purchasing.

Indicative funding requirement:

USD 100,000 – USD 500,000 depending on scale.

8. USE OF FUNDS

Proposed allocation:

- Equipment acquisition
- Processing systems
- Facility setup
- Licensing and compliance
- Operational staffing
- Community engagement
- Working capital

9. GROWTH POTENTIAL

Future expansion opportunities include:

- regional processing hubs,
- refining partnerships,
- export certification,
- cross-border sourcing,
- and expanded equipment services.

10. ESG & RESPONSIBLE MINING

The project aims to align with international responsible mining standards through:

- mercury reduction,
- safety improvements,
- community engagement,
- transparent sourcing,
- and formalized miner participation.

11. CURRENT STATUS

Current activities include:

- field intelligence gathering,
- stakeholder engagement,
- opportunity assessment,
- and operational planning.

12. INVESTMENT & PARTNERSHIP OPPORTUNITY

The project is seeking:

- strategic investors,
- equipment partners,
- processing technology providers,

- and responsible sourcing collaborators.

Discussions are welcomed with organizations interested in scalable and responsible gold sector development in East Africa.
